Picture Rail Display System

Picture This!

Suitable for use across a broad range of commercial and domestic environments the Locator picture hanging system is a stylish and contemporary alternative for displaying artwork or large format graphic panels.

Standard hangers, whether clear nylon or stainless steel cable, simply insert from the ends of the profile or through the access slots in the rail (LNC, LSS COBRA hangers). Once in place hangers can slide anywhere along the length of the rail into the required position.

Simple to install and use

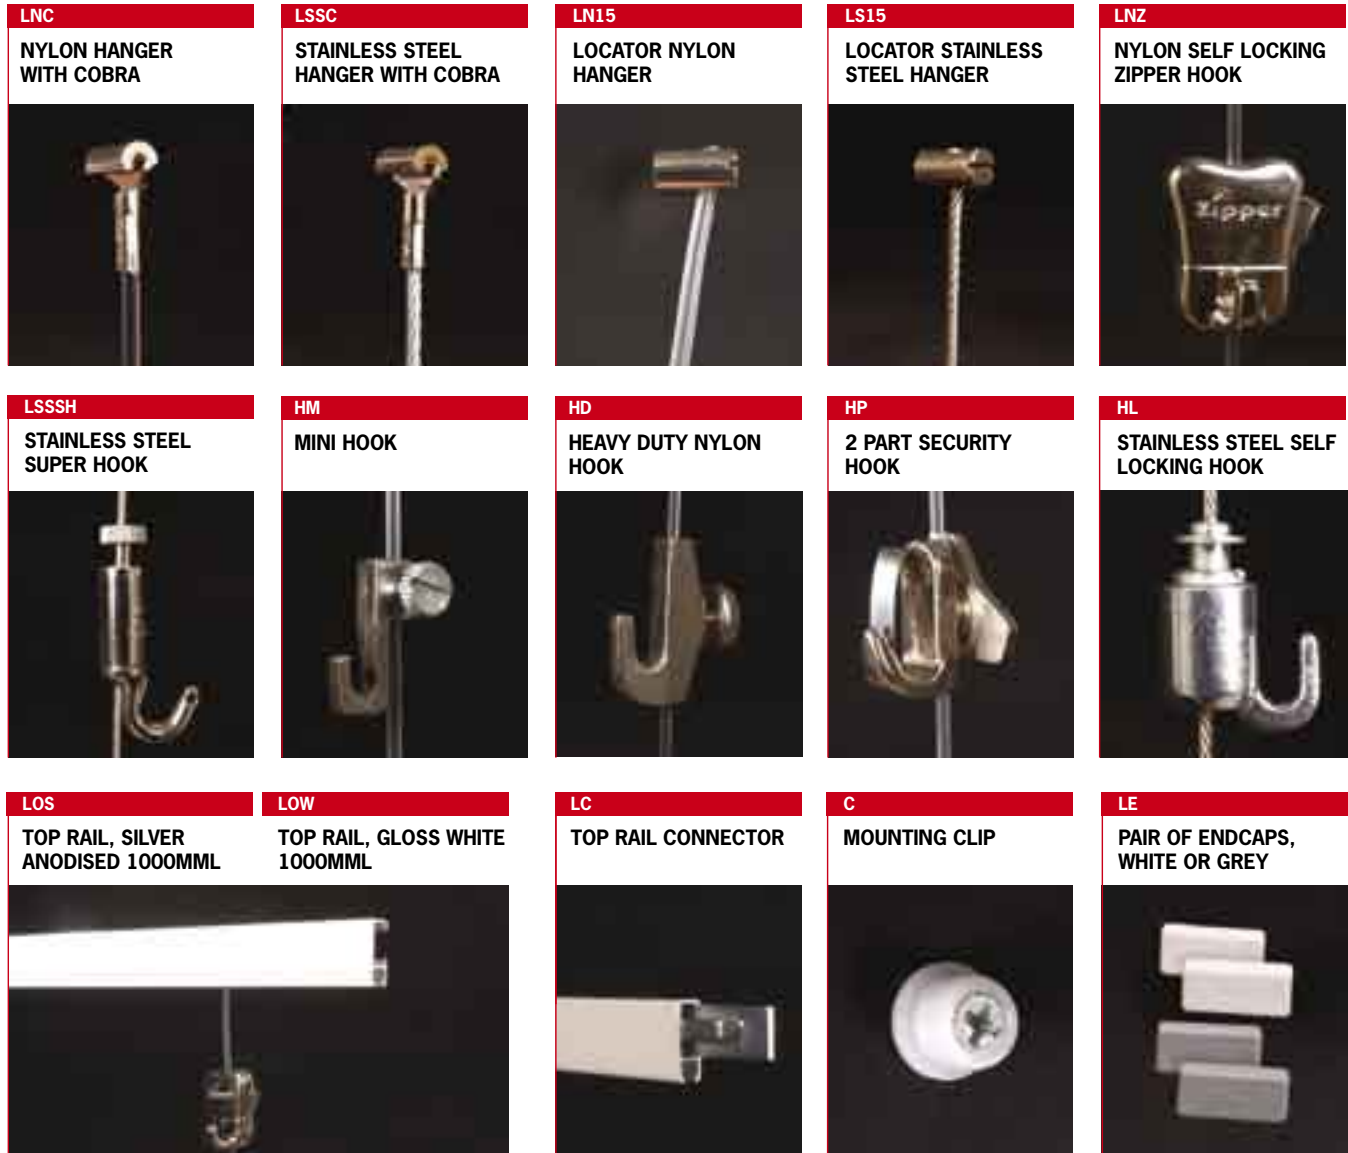

Engineered for direct, wall mount application the Locator picture rail display system consists of an aluminium top rail (available in a gloss white or satin anodised finish up to 3000mmL), nylon bushes, fixing screws and hangers.

Easy to install, the Locator Top Rail simply snaps onto a horizontal row of nylon bushes which, are screwed directly into the studs in the wall. Once in place the Locator Top Rail hides all fixing points from view.

Picture hangers can be inserted directly from the access slots or ends of the Locator Top Rail and can be positioned anywhere along the length of the rail.

Hangers & Locator Top Rail

Technical Data

- Standard Locator Top Rail profiles are available ex stock in a white gloss powdercoated and satin anodised aluminium finish in lengths of up to 3000mm.
- Nylon bushes, fixing screws and masonry plugs are supplied for the Top Rail at the rate of nine per 3000mm length. Extra fixing packs are available if required.
- When installed, Locator Top Rail, fixing screws and mounting clips are hidden from view. Fixing points can be positioned anywhere along the horizontal line but must support the whole length of the rail. Top rail clips over mounting clips
- Connectors are available to join 2 separate lengths of rail. End caps are supplied to cover exposed profile ends.
- If you are using the Locator Top Rail as an architectural detail around a room, outside corners can be mitred whilst the inside corners are typically butt joined.

Nylon bushes with screw fixings secure directly into the wall studs

Locator Top Rail slides over or snaps onto the nylon bushes. When in place the top rail obscures all visible fixing points

Picture hangers simply insert directly from the access slots or from the ends of the Locator Top Rail
